WEBSITE SPECIFICATION

INTRODUCTION

I looked at the market for youth and realized a massive frustration .they are usually forced to choose between hype and comfort .the sneakers that look incredible on Instagram feel like walking on a cardboard ,and the shoes built for all day comfort look totally generic .to make it worse ,major sneaker culture has become exclusive, overpriced and ruled by resellers. STREET FLEX is the solution .we are bridging that gap by delivering shoes that look premium ,feel amazing all day ,and don't cost a month rent .the website is not an online store it's the digital the digital equivalent of a flagship streetwear boutique.

AIM

To build an online destination that doesn't just sell footwear ,but connects directly with modern street culture .we want to turn casual browsers into loyal brand advocates by making the shopping experience effortless, visual and highly secure.

OBJECTIVES

Mobile first flow

Customers will find street flex on their phones while scrolling through social media on the go, like waiting for coffee etc. I will be designing it to be adjusted by every screen size .this means keeping pages fast so images load instantly making buttons larger enough to easily tab and offering one tap so they can buy a pair of shoes in seconds without pulling out their wallet .

Frictionless checkout

No complicated forms .get to order with no headaches

Visual storytelling

Use clean ,high contrast layout so the product and styling do all the talking

Security

Build instant trust with encrypted ,seamless payment options.

TARGET AUDIENCE

My target audience are typically young adults aged 18 to 40 years individuals as they more interested in fashion and they are active online and prefer browsing and buying through digital platforms especially on mobile devices. It's also cater to shoppers who want an easier and more enjoyable alternative than crowded physical stores and should be user friendly online shopping.

WEBSITE TYPE

The website that I am creating is an e commerce platform specifically designed for selling shoes online .it is a fully online store where customers can browse products and images select sizes an and purchase. It show case the styles ,identify and values of the business we will be providing content like style tips and customer support information .we will also have product catalog and secure shopping system .

INFORMATION DESIGN AND TAXONOMY

The website will be created in such a way that it reduces unnecessary information and makes it easier for users to find exactly what they want. The layout will have clean products and readable text, including menus. Customers will be alerted when there are new arrivals and when we have sales.

SITE MAP

HOME (index.html)

SIGN IN(sign in.html) LOG IN(log in.html)

ABOUT(about.html)

PRODUCTS(products.html)

CONTACT(contact.html)

PAYMENT(payment.html)

FEEDBACK(feedback.html)

NAVIGATION STRUCTURE

The structure of the website will be easier to understand. the most important sections on my website are the home ,about ,products, contact payment and feedback. The products section will be classified looking at the different types of shoes there will be sales and new arrivals .the navigation element will include search bar ,cart and account log in or register for quick actions .in the footer section there will be links to support pages. There will be privacy policy ,terms and conditions and cookie policy .

CONTENT CATEGORIES

HOME PAGE

Introduction to the brand and featured products.

PRODUCTS PAGE

Displays all available products with images and prices.

ABOUT PAGE

Provides information about the brand.

CONTACT

Displays all available contact information so that you can reach out to.

PAYMENT

Allows users to choose types of payment methods they feel comfortable with.

FEEDBACK

Allows users to send messages or feedback.

TECHNICAL BRIEF

To build this website I am going to use HTML5 to create a clean ,organized structure with semantic tags like <header>,<nav>,and< footer > while handling all the styling and responsiveness through CSS using flex box and media queries so the layout looks great on any screen size .I will source high quality, on brand imagery from Pinterest to establish a modern identity ,and write all of my code using visual studio code .finally ,I link my vs code directly to GitHub to manage version control and securely push the final project the final project files online for cloud storage and live deployment.
